

Minimize your risk with a framework of control

COMPLETE YOUR HYPERION UPGRADE QUICKLY AND ACCURATELY

BUSINESS CHALLENGE

As Oracle support for Hyperion version 7 approaches expiration, companies are under increasing pressure to migrate their business-critical enterprise performance management solutions to the latest Hyperion releases. For many businesses, it can be an overwhelming and daunting task.

Determining where to begin can be a struggle in and of itself. Although skilled in day-to-day administration of their systems, companies have difficulty evaluating the magnitude of the conversion and assessing the sheer volume of reports they maintain. Often, the true level of effort remains a mystery until companies are well into the migration process, breeding confusion and extending the project timeline indefinitely.

Hyperion System 9 and 11 bring with them significant functional improvements including self-service capabilities, ad-hoc reporting, web-based administration and more. Yet, to take advantage of these enhancements, companies must skillfully integrate and configure new modules such as Shared Services and SmartView and effectively transition to a multi-tiered architecture. Few companies maintain sufficient internal resources to dedicate to such an effort.

That's where Rolta TUSC can help. Through extensive hands-on experience with Hyperion migrations, Rolta TUSC has developed a migration framework and a proven set of accelerator tools that will help you assess your current environment and upgrade your Hyperion suite efficiently, effectively and without error.

SOLUTION OVERVIEW

With a proven set of accelerator tools, Rolta TUSC experts are able to quickly assess your Hyperion environment, determine the magnitude of the migration effort and then convert your critical data infrastructure rapidly, accurately and with minimal disruption to your business.

Our skilled consultants have extensive knowledge of networks, Web servers and OS configurations – all of which are required to make your migration to System 9 or 11 a success.

In addition to our traditional assessment and migration services, Rolta TUSC can also provide capacity planning for your underlying infrastructure as well as train your staff on how to best take advantage of the functionality in new modules.

BENEFITS

By leveraging Rolta TUSC's extensive experience in Hyperion migrations, you can expect to:

- **Minimize risk and reduce cost**—With repeatable and predictable processes, Rolta TUSC provides a framework of control to help you avoid common pitfalls and ensure your migration is completed on time and within budget. We also protect your business operations from disruption during the migration.
- **Rapidly and accurately complete your implementation**—Rolta TUSC removes the need to manually migrate reports with a proprietary set of migration scripts that automate the entire process. Not only do these custom tools decrease your migration time, but they also ensure that no object, report or script falls through the cracks.
- **Take advantage of new features**—Rolta TUSC consultants help your staff maximize the use of new features to ease and improve day-to-day business processes.

TESTIMONIALS

“Rolta TUSC provided us with a team that brought together the right mix of complementary skills and experiences and made our project a success. They completed the project on time and under budget which allowed us to use them on other high-value process improvements that will make our staff even more capable going forward. We prefer working with the Rolta TUSC organization rather than with vendor-based consultants because Rolta TUSC technologists bring industry-specific experience and can nimbly react to changing requirements and resource needs.”

— *Senior Vice President*

“Rolta TUSC was the consulting group selected to upgrade our Hyperion environment to System 9.3.1. With the difficult nature of this process, Rolta TUSC was able to provide consultants, each with a different specialty, to ensure an issue-free migration. The consultants were able to balance their time enough to perform a very thorough and smooth transition.

They provided in depth knowledge base training along with detailed documents to ensure that we understood how to handle issues and troubleshoot matters that may arise. What I really appreciate from the Rolta TUSC consultants was their support even after the process was complete. They went above and beyond the means necessary to assist our group when unknown issues arose. Needless to say, the migration was successful and we were more than pleased with their efforts and results. Lastly, it was very easy to build a rapport and work with each one of the consultants. When it comes time to migrate to the next version, they would be my first choice.”

— *Senior Systems Administrator*

SOLUTION DETAILS

Rolta TUSC provides a proven process to migrate your Hyperion suite efficiently, effectively and without error from start to finish. Our consultants work closely with your team to identify the affected components of your Essbase, Planning, and/or Hyperion Financial Management (HFM) environment upgrade. We leverage our proprietary tools to quickly identify and audit all underlying objects in your systems that need to be migrated including your critical load rules, filters, groups, calc scripts and MaxL scripts.

Rolta TUSC consultants configure and integrate all new version modules including security through Shared Services and SmartView. Rolta TUSC's dynamic scripts then convert your data to the updated Hyperion platform, eliminating the need for manual report conversion and substantially reducing the time required for conversion. Because we utilize an automated script, risk is virtually eliminated. If an error is encountered, consultants can re-initiate any given portion of the conversion with the touch of a button. We then work with your team to validate and stabilize the new environment.

Should your migration coincide with a hardware upgrade, Rolta TUSC also provides capacity planning services to ensure the new server/storage environment is properly configured to optimize Hyperion's performance and promote scalability for the future. Optional in-depth training services are available to ensure your staff can leverage the improved functionality of your new Hyperion platform.

ABOUT US

TUSC has been known as the Oracle Experts for more than 20 years, but Rolta TUSC is so much more than that now! Through the merger of Rolta's IT Consulting Division with the acquisitions of TUSC, WhittmanHart Consulting, and Piocon Technologies, we have gained some of the world's most knowledgeable technology and business experts in enterprise performance management, business intelligence, and CA infrastructure management solutions.

While we have added exciting new capabilities, we remain committed to maintaining our expertise and industry leadership in Oracle E-Business Suite and Oracle Technology. Now more than ever, Rolta TUSC has the expertise and solutions your organization will need to be competitive in our new economy.
