

Enable the Agile Enterprise with Oracle SOA and BPM Technology

GAIN OPERATIONAL EFFICIENCIES, REDUCE COSTS AND IMPROVE BUSINESS AGILITY

BUSINESS CHALLENGE

In today's competitive business environment, being able to adapt your products and service models to evolving customer requirements is critical to sustaining profitability. Accustomed to the on-demand service proffered by the Web, customers have come to expect rapid service and high-quality products tailored to their specific needs. To meet these demanding customer requirements and enable overall business flexibility, your IT team must be positioned to develop new applications and integrate services with speed, ease, and at minimum cost.

Historically, development and integration of disparate systems in complex application and IT environments has been a slow, painful and expensive process. Even the simplest business change has required your developers to make associated changes in every location where a specific piece of code resides. As the requests for modifications, new development and integration accumulate, IT struggles to keep pace and enable a more agile enterprise.

To solve this problem, many customers are adopting service-oriented architecture (SOA) to modernize their applications and their development process. SOA facilitates the development of enterprise applications as modular business services that can be easily integrated and reused throughout the organization. Rather than developing from the ground up every time a change is needed, new assets can be created easily from existing services, saving your company time and money.

If your business is in an industry that is constantly changing, must deliver service through multiple business channels or is facing significant development work, SOA may well be the only way for you to achieve the agility modern business demands.

SOLUTION OVERVIEW

Rolta TUSC stands ready to help your business harness the power of SOA and better support the demands of modern business. Our experienced consultants tailor a combination of Oracle's leading SOA and Business Process Management (BPM) technologies to create a comprehensive and flexible architecture that will allow your business to rapidly and cost-effectively respond to change.

- **Oracle SOA Suite**—The Oracle SOA Suite enables you to seamlessly build, deploy and manage a service-oriented architecture. It includes components for service-oriented application development, service-oriented applications and IT systems integration, and ongoing service management.
- **BPM Suite**—A complementary offering, the Oracle BPM Suite allows you to model, automate, manage, simulate, optimize and execute business processes to populate your SOA infrastructure.
- **iPerspective**—For businesses that desire to retrofit their legacy applications with SOA in addition to utilizing the architecture for new development going forward, Rolta TUSC offers its innovative iPerspective technology, to expedite the process and deliver rapid ROI.

BENEFITS

By transitioning to a service-oriented architecture with Rolta TUSC and Oracle, your business can expect to:

- **Improve business agility**—With reusable service components, you can more rapidly assemble services into new applications, improving time-to-market.
- **Reduce costs**—Because SOA services are both standardized and reusable, you're able to dramatically lower integration and maintenance costs.
- **Increase IT efficiency**—With reusable code, automatic integration and easy modeling of business processes, repeated, one-off programming is eliminated.
- **Leverage existing investments**—You're able to modernize and integrate your legacy applications, preserving your investments.

SOLUTION DETAILS

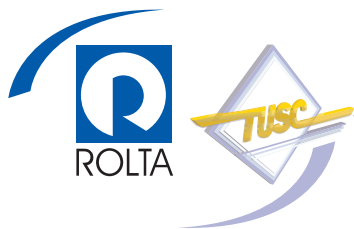

With 20 years of Oracle experience, Rolta TUSC stands ready to help you harness the power of SOA and better support the demands of modern business. We help you assess your SOA readiness, define a roadmap for success, and implement leading Oracle SOA technology to increase business agility for your enterprise. Our key solution offerings include:

Oracle SOA Suite

Rolta TUSC consultants can implement a custom mix of products or the entire Oracle SOA suite for a fully integrated solution. Components include:

- **Oracle BPEL Process Manager**—Composes services into business processes. It includes built-in integration and human workflow services
- **Oracle Business Activity Monitoring**—Provides real-time visibility into operation and performance of business processes and services through dashboards and alerts
- **Oracle Business Rules**—Captures and automates business policies
- **Oracle Service Bus**—The backbone into which services are plugged, the Service BUS connects applications and routes messages
- **Oracle Web Services Manager**—Enables centralized definition and enforcement of policies that govern Web Services operations
- **Oracle JDeveloper**—An integrated development environment (IDE) to develop, debug, profile, and deploy services

The suite also includes adapters enabling connectivity to virtually any data source, complex event processing capabilities, and a fully centralized management console.

Oracle Business Process Management Suite

Complementary to the SOA suite, this product suite allows you to model, automate, manage, simulate, optimize and execute business processes to populate your SOA infrastructure. It provides a set of tools for both line-of-business users and IT developers supporting human- and system-centric processes.

Rolta TUSC iPerspective

Our innovative tool enables you to transition your existing applications to SOA architecture with minimal time and effort – without the need to re-build or re-code. iPerspective automates the process of wrapping packages, procedures, functions, tables, and views into services (in a browser-based environment) that can be shared as you determine—no matter in what language they were written or on what platform they are running.

ABOUT US

TUSC has been known as the Oracle Experts for more than 20 years, but Rolta TUSC is so much more than that now! Through the merger of Rolta's IT Consulting Division with the acquisitions of TUSC, WhittmanHart Consulting, and Piocon Technologies, we have gained some of the world's most knowledgeable technology and business experts in enterprise performance management, business intelligence, and CA infrastructure management solutions.

While we have added exciting new capabilities, we remain committed to maintaining our expertise and industry leadership in Oracle E-Business Suite and Oracle Technology. Now more than ever, Rolta TUSC has the expertise and solutions your organization will need to be competitive in our new economy.
